

STARTMANAGER™

The ShockWatch StartManager™ accurately records and reports equipment access while restricting usage to authorized operators. The unit transmits data via an iButton to a management software program, eliminating the need for paper retrieval and record retention. This electronic data flow makes it easy to organize and reference usage information, enabling more effective and efficient management of fleet equipment.

The use of equipment by trained, authorized operators is critical for workplace safety and OSHA compliance. The StartManager reliably monitors operator identity, allowing supervisors to determine accountability if damage does occur. Over time, smart management of operator access lowers the cost of repairs and replacements, extending equipment performance and lifecycle.

Use StartManager on:
Forklifts/material handling equipment
Fleet vehicles
Offshore drilling equipment
Mining equipment
People-moving equipment
Earth-moving equipment
Stationary machinery and equipment
Production equipment
Other facility assets
And much more

■ Benefits

- Reduces operator injury and damage to equipment, products, or facility due to unauthorized equipment usage
- Lowers costs associated with worker injury and damage
- Reinforces safe vehicle operation and procedures without supervisory oversight
- Ensures that only trained and certified operators access equipment
- Allows for timely corrective action following equipment misuse
- Supports OSHA compliance by providing access to operator data
- Reduces equipment downtime
- Allows for use on any type of equipment

■ Features

- Monitors and controls access to equipment operation
- Reports data via an iButton
- Includes user-friendly software with client server and Internet capabilities
- Works in conjunction with your preferred access device, including HID proximity card readers, iButton readers, or infrared readers
- UL rating (pending) — Type E, EE, GS, LP, LPS, DE and DS
- CE-certified (pending)

■ Software

At the heart of this ShockWatch innovation is its proprietary software package. The StartManager software serves as a full network application to monitor access on multiple pieces of equipment. It allows for the remote management of access and gives you the flexibility to analyze equipment access through reports that can be exported to Microsoft® Excel for further analysis.

- Runs on Windows® NT, 2000, and XP
- Easy to install, use, and train

■ Specifications

Operating Temperature

-4°F/-20°C to +140°F/+60°C
(optional heater available for cold room applications)

Case Size

2.75"/69.85mm x 4"/101.6mm x 1.125"/28.58mm

Input Voltage

10 to 60V DC
