

Minimise the risk of collisions between forklifts in narrow aisles

Narrow Aisle Safety (NAS)

The **Narrow Aisle Safety (NAS)** solution cautions forklift drivers of the proximity of another forklift in areas with limited room to manoeuvre by triggering a traffic light or similar.

The trucks incorporate a TZ-50 tag which emit signals that are detected by an AC-50 Activator unit to trigger a traffic light to indicate the presence of a forklift in the area.

The system comprises the following components:

- AC-50 RFID activator
- Traffic light
- Forklift TZ-50 tag

System features:

- Easy implementation by local distributor or installer.
- Durable and robust system's components.
- Applicable to all types of industrial vehicles.

Areas of Application:

- Confined areas.
- Poor visibility areas at junctions between forklifts.
- Areas with high forklift traffic
