ShockDot™ Impact Indicator

ShockDot impact indicators acts as a visual deterrent to improper handling.

Protect your investments. Drive down damages. Improve your margins.

ShockDot is a cost-effective solution that detects the mishandling of products and packages during shipment. Alerting handlers that a package is being monitored and requires extra care will ultimately reduce damage related costs. ShockDot indicators turn red when a potentially damaging impact occurs. The indicators are tamperproof and serialized to ensure the user that the device has not been switched during transport. The QR code on each label allows customers to verify that they have received the quality and reliability of an authentic ShockWatch product.
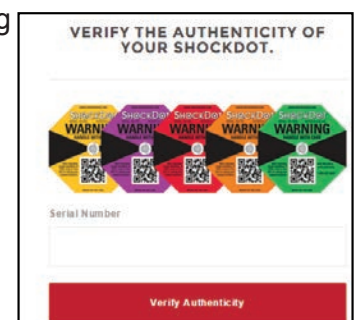

ShockDot indicators are a simple solution for identifying potentially damaged shipments and driving accountability in the supply chain.

Interpreting the ShockDot

If a package has not been mishandled, the circular ShockDot indicator will remain white with a dark red dot in the center. If the package has been dropped, the ShockDot indicator will show full or partial red coloration. Any red in the white area of the ShockDot indicator window alerts receivers to inspect the package for potential damage.
